Global, JSI, OFS

THE STORY

OBJECTIVE

To create a future-focused, sustainability-driven showroom that serves as an interactive experience for clients, partners, and industry professionals. The goal was to bring the “Planet First” mission to life through an immersive space that demonstrates how sustainable design and innovative technology can shape the workplace of tomorrow.

DESIGN SOLUTION

The showroom was thoughtfully curated to reflect a deep commitment to environmental stewardship and biophilic design. Signature elements like a curved moss wall and tree-patterned glass film guide visitors through the space, reinforcing the harmony between nature and the built environment. Sustainable materials—including reclaimed wood, recycled metals, and eco-friendly textiles—are used throughout, while furniture selections are sourced from manufacturers with GREENGUARD, LEVEL, and WELL certifications to support wellness and environmental standards. Living walls, cloud-

inspired acoustic panels, and natural textures bring the benefits of biophilic design to life, fostering a sense of calm and connection. Smart technology features such as energy-efficient lighting, optimized daylighting, QR code interactivity, and HD-enabled AV systems enhance both the functionality and sustainability of the space, creating a showroom that is as innovative as it is inspiring.

DESIRED OUTCOME

The goal was to create more than just a showroom—it’s a tangible demonstration of how sustainability and innovation can coexist in the modern workplace. By blending aesthetics, functionality, and environmental responsibility, the space invites visitors to reimagine what the future of work can look like. It’s designed to spark meaningful conversations, inspire purposeful design decisions, and reinforce Rightsize Facility’s position as a leader in sustainable workplace transformation.
